Tentative Agenda

Technologies and Policies for Green Freight on Roads and Oceans

Background
Freight is as important as passenger transport for the decarbonisation of the sector. However, governments and companies tend to turn a blind eye on the necessary actions to minimise its footprint. This has to do with limited knowhow and capacity as well as with the highly commercial nature of the sector, its fragmentation and thin profit margins. The responsibility to act is predominantly with businesses, yet supportive policy is key to creating a level playing field and raising business standards. This counts for road and ocean freight alike.

Objectives
- Understand how tackling freight is different from passenger transport
- Peek into inspirational initiatives happening around the world
- Boost your green freight knowhow!

Monday, 2nd March, 2020

10:00 Coffee Break and registration
10:30 Welcome and Session Intro Friedel Sehlleier, GIZ Transfer
10:40 Decarbonising Road Freight
Get to know the full spectrum of road freight options and how to get clean trucks and related technologies adopted faster
Engage in peer learning with countries that are advancing green freight actions
Felipe Rodriguez, HDV Program Lead, ICCT
Country inputs from India, Mexico and Peru (Klas Heising, GIZ)
12:30 Lunch
14:00 Sailing towards low carbon ships
Learn everything on maritime transport emissions and the current and future mitigation approaches
Norway’s government action plan for green shipping
Michael Vahs, University Emden-Leer
Sveinung Oftedal, Director Dept. Maritime Management and Conservation, Ministry of Climate and Environment, Norway
15:30 Coffee, Tea & Snack Break
16:00 Capacity building for low carbon shipping
